

MyFinances

User Guide

A simple guide to planning your income, payments, expenses & savings
iPhone · iPad · Mac · Apple Watch

Written for everyday use — no technical knowledge required.

What's inside

1. What MyFinances does for you
2. Getting started (first open & security)
3. Profiles & your billing cycle
4. Overview — your money at a glance
5. Income
6. Payments
7. Installments
8. Expenses
9. Savings
10. Salary & End of Service (EOS)
11. Search
12. Settings (currency, Wallet, backup...)
13. Apple Watch & widgets
14. Syncing across your devices (iCloud)
15. Quick tips & common questions

1. What MyFinances does for you

MyFinances helps you plan the month the way salary actually works. If you get paid on the 27th, your “month” can run from the 27th to the 26th — not only from the 1st to the 31st.

With the app you can:

- See how much income you have for a cycle
- List every bill and mark each month as paid or unpaid
- Track installment plans and link them to payments
- Log everyday spending (groceries, fuel, and more)
- Watch savings grow when you mark a savings payment as paid
- Estimate end-of-service benefits (UAE private, public, or domestic)
- Export a PDF summary or add a balance pass to Apple Wallet
- Use the same data on iPhone, iPad, Mac, and Apple Watch when iCloud is on

2. Getting started

When you open the app

You'll see a short welcome screen, then either your main tabs or a lock screen if security is turned on.

Keeping the app private

You can unlock with Face ID on iPhone or Touch ID on Mac. Optionally set a PIN as a backup. Turn this on or off anytime in Settings. If you leave the app for a few minutes, it can lock again automatically.

Tip: Security only controls opening the app on that device. Your Apple ID and iCloud still protect cloud data.

3. Profiles & your billing cycle

A profile is a separate set of numbers — useful if you track your own money and someone else's, or personal vs another budget.

Each profile has:

- Its own income, payments, expenses, and savings
- Its own salary details and EOS calculation
- Its own cycle start day (for example day 1 or day 27)

How to switch or add a profile

1. Open Settings (on iPhone, use the More tab if you don't see Settings in the main row).
2. At the top, tap a profile to switch, or Add Profile... to create one.
3. Use the pencil to rename, or the trash icon to delete (be careful — that profile's data goes with it).

Settings on iPad: profiles, billing cycle day, Apple Wallet, and currency.

Your billing cycle

Under Billing Cycle, choose which day of the month your cycle starts. If it starts on day 1, you'll see ranges like 01 Aug – 31 Aug. If it starts on day 27, you might see 27 Jul – 26 Aug for the "July" cycle.

Tip: Match the cycle start day to when your salary usually arrives. Overview and payments will follow that rhythm.

4. Overview — your money at a glance

Overview is the home dashboard for the profile you're using. Pick Month or Year, then choose the year and month (or cycle).

Overview on iPhone: due items, income, remaining, unpaid, and expenses for the selected cycle.

What the coloured cards mean

- **Income** — money you recorded for this cycle
- **Planned remaining** — what's left if every payment in the plan is paid (can be negative if plans exceed income)
- **After paid** — income minus only what you've already marked paid
- **Unpaid** — total still unchecked for this cycle
- **All payments** — sum of payments that belong to this cycle
- **Expenses** — day-to-day spending you logged for this cycle

Due today & overdue

When something is due today or late, a warning card lists those payments so you can act without hunting through the full list.

Charts & history

On larger screens you can see remaining over the last 12 cycles (bars or line). This helps you spot tight months over time.

Overview on iPad: month/year controls, summary cards, and the last-12-cycles chart.

Export PDF

Tap Export PDF to share or save a summary of the cycle you’re viewing — handy for records or planning.

5. Income

Use the Income tab to record what you receive each cycle. Choose the year, add a month/cycle label, amount, and an optional note.

If you've filled in Salary & EOS, the app can suggest your total monthly salary as the default amount when you add income.

- Search the list when you have many entries
- Edit or delete a row when something changes
- Copy income into the next year when that option is available, so you don't retype everything

6. Payments

Payments are planned bills: rent, utilities, subscriptions, installments, or transfers to savings.

Payments on iPhone: filter by cycle or full year, search, and mark each month paid with the switches.

Adding a payment

1. Tap the + button.
2. Enter the name and amount.
3. Set the due day (1–31).
4. Choose which months it applies to (or every month).
5. Pick a category (or create your own).
6. Save.

Marking months paid

Each month can be on or off independently. That way a yearly bill can be paid for January–July without marking August yet.

Filters

Use Due this cycle to focus on what matters now, or Full year / All months when you need the big picture. Search by name when the list is long.

Tip: If the category is Savings and you mark a month paid, the amount can appear under the Savings tab (and on your Wallet pass total).

7. Installments

Installments are for multi-month purchases. When you save a plan, the app can create the matching payment rows so you track each due month in Payments.

Cancel Save

Add Installment

Details

Name

Start date Aug 16, 2026

Note

Amounts

Total amount 0.00

Monthly install... 0.00

Number of months 12 - +

Creates one payment per year the plan covers.

Add Installment: name, start date, total, monthly amount, and number of months.

Filling the amounts

Enter the total and number of months — or the monthly amount and months. The other field updates to match. Amounts use two decimal places.

Note: The form explains that one payment is created per year the plan covers, so long plans stay organised by year.

8. Expenses

Expenses are everyday spending inside a cycle — after you've planned bills. They reduce what's left on Overview.

Cancel Save

Add Expense

Details

Name

Amount

Date Aug 16, 2026

Category Grocery

Year 2026

Month July

Note

Add Expense: name, amount, date, category (for example Grocery), year, month, and optional note.

Categories & limits

Choose Grocery, Fuel, Food, Shopping, or a category you create. In Settings you can set spending caps per category; Expenses can warn you when you're over.

9. Savings

Savings grow when you treat a payment as a savings transfer and mark it paid, or when you add savings in the Savings area. You can also set a savings goal (target amount) and watch progress toward it.

Your total savings for the active profile can appear on the Apple Wallet pass when you use Add to Wallet.

10. Salary & End of Service (EOS)

< Installments Expenses Savings **Salary & EOS** >

Aug 16, 2026

Set end / resignation date

Using today as end date

Limited contract

Years of service

0.00 years

EOS advances / deductions

Salary & EOS: country/law, employment type, salary breakdown, service period, and advances.

Salary breakdown

Enter Basic, Housing, Transport, and Other. Total monthly becomes the default income amount for this profile. EOS math uses amounts stored in AED.

Employment type

Choose Private, Public, or Domestic. The estimate follows the rules built in for that type. Set your join date; optionally set a resignation date or limited contract. Years of service update automatically.

EOS advances

If you took advances against end of service, add them here. Net EOS is the estimate after those deductions.

Note: Figures are for planning only. Confirm final amounts with your employer or official guidance.

11. Search

Open the Search tab to look across the app, or use the search field on lists like Payments and Income when you only need that section.

12. Settings

Settings on iPhone: Add to Wallet, currency, and exchange rates.

Apple Wallet

Add to Wallet creates a pass with your current cycle snapshot — remaining balance, unpaid count, profile name, and savings total. This may be a Pro feature. Create a new pass after your numbers change; older passes are a snapshot from when you generated them.

Currency & exchange rates

Amounts are stored in AED and shown in the currency you pick. Rates are values you can edit (manual estimates in the screens shown) — use your bank for official conversion when it matters.

Other Settings you'll use often

- Reminders before payment due dates (and optional calendar entries)
- Expense category caps
- Reorder tabs so your favourite screens are first
- Export or import a full backup file
- Reset all app data (permanent — confirm carefully)
- Privacy policy and Contact Developer

13. Apple Watch & widgets

Apple Watch Overview: remaining and unpaid for the current snapshot.

On the Watch you can see remaining money and unpaid counts at a glance. With the iPhone nearby and the Watch app installed, you can keep an eye on the cycle from your wrist.

Home Screen widgets on iPhone show the same style of summary. Open Overview once in the main app if a widget still shows zeros — that refreshes the numbers.

14. Syncing across your devices

When iCloud sync is enabled and you use the same Apple ID on iPhone, iPad, and Mac, changes can appear on every device. Stay on Wi-Fi after big imports so sync can finish.

Tip: After installing the app, give sync a few minutes. On each device, select the same profile name to see the same numbers.

15. Quick tips & common questions

Why does Overview show a cycle like 27 Jul – 26 Aug?

Because your profile's cycle starts on day 27. Change it under Settings → Billing Cycle if you want calendar months instead.

Why is planned remaining negative?

Planned payments for that cycle add up to more than recorded income. Add income, reduce plans, or check you're on the right profile and month.

A payment doesn't show in this cycle

Check due day, year, and which months are selected on the payment. Cycle membership follows those settings plus your cycle start day.

Widget or Watch shows AED 0

Open Overview on iPhone or Mac so the app publishes a fresh summary, then check the widget again.

Wallet pass numbers look old

Generate a new pass from Settings after you update payments or savings. Remove the old pass from Wallet if you like.

Thank you for using MyFinances. For support, use Contact Developer in Settings → About.
